

EIS eNET-ME Hardware/Software Requirements

The following are the minimum requirements to use the EIS eNET-ME application:

- 1) Must have an ISP (Internet Service Provider);
- 2) Note: AOL does not work for EIS eNET-ME on most machines;
- 3) Microsoft Internet Explorer only --Version 6.0 or better;
- 4) Must have virus software loaded;
- 5) Windows XP recommended; and
- 6) Browser Security set to Medium.

Note: Performance will be relative to the hardware (CPU speed and memory installed) as well as the connection method - broadband vs. dialup.

Note: Different ISPs have different timeout mechanisms, and this may impact the end user when saving the assessment. So, users may have to save frequently.

Note: EIS eNET-ME was designed to work with a screen resolution of 800x600 however many users choose 1024x768. The user's individual choice may cause him/her to scroll more or less often, and placement of some screen items may change depending on the choice of resolution.
